

Ecodesign Directive (2009/125/EC) and Energy Labelling Regulation (2017/1369/EU) (CE17)

The Ecodesign Directive affects most products that use or impact electricity, fossil fuels or renewables. As well as applying to products it also applies to component parts such as fans and motors. New product classes are added all the time. This directive forms part of the CE marking obligation for manufacturers. The Energy Labelling Regulation gives obligations through the supply chain to ensure that users are informed of the energy profile of products. It also deals with product labels.

Topics covered:

- Ecodesign Working Plan
- Directive and Regulation overview
- Implementing measures both Vertical and Horizontal
- Product specific categories
 - Fans
 - Lamps
 - Heating and Cooling Products
 - Water heaters and water storage tanks
 - External Power supplies
 - Standby/Off mode
 - Network Standby
 - These can be tailored to individual requirements
- Technical documentation and evidence of compliance

Who should attend?

Anyone involved in the manufacture, importation: design, health and safety officers, importers, managers, purchasing of products. Attendees are expected to have a basic understanding of what CE and UKCA marking is before they attend. Please see our Introduction course as a prerequisite.

Cost: £299 + VAT per person for a single half day course.

Book online at <https://shop.conformance.co.uk> or by phone on +44 (0)1298 873800.
